AI Strengthens the Bottom Line of Shipping Lines through an Optimized Fleet and its Deployment

It has been nearly two years since the start of the worldwide COVID-19 pandemic and its resultant trade challenges, however as we see it today, the global economy is ready for the possible rebound predicted by the World Bank. With approximately 90% of the world's goods being transported by sea, and over 70% of these goods moved in containers, the importance of fleet and service optimization is paramount.

When it comes to deploying the right vessel on the best service for maximum revenue, shipping lines need to harness the power of hybridised solutions of Optimization and Artificial Intelligence.
